
JoomlaCloner 1.8 Beta

Posted by admin - 2006/10/15 05:04

Hello all!

We have added a new JoomlaCloner version compatible with the latest Joomla 1.5.0 Beta!

This version will run with both Joomla series (1.0.x and 1.5.0), however this is still in Beta so any problems you encounter please report them to us!

You will find the download link in your Members area <http://www.joomlaplug.com/members/member.php>

Also as you will notice, because of security issues we have experienced lately, we decided to add a license key to the component! You will still be able to use it on your websites, but you will need to register them in your 'Edit Profile' section!

After adding the sites and saving the profile, a license key will be generated and which you can use in your component, add it in the JoomlaCloner COnfiguration area, the License Code field!

Looking forward to your opinions!

JoomlaPlug.com Development Team
