
404 Not Found?

Posted by Alvin Yap - 2007/02/22 17:05

Hi!

I installed Joomla with JoomlaStart before and it worked fine. And upon reinstallation, used JoomlaStart again.

1st step, I got through:

We have uploaded the JoomlaStart Installer file on your ftp site, to continue click here
http://www.mediapekerja.net/public_html/Joomla.Start.php

Then when I click it, get this message:

Not Found The requested URL /public_html/Joomla.Start.php was not found on this server.

Additionally, a 404 Not Found error was encountered while trying to use an ErrorDocument to handle the request.
Apache/1.3.37 Server at www.mediapekerja.net Port 80

I checked my FTP and it has the file Joomla.Start, and public_html is set 777.

What am I doing wrong? Thanks in advance.

I think the url you are using is wrong http://www.mediapekerja.net/public_html/ is infact <http://www.mediapekerja.net/>

so the Joomla.Start.php should be here <http://www.mediapekerja.net/Joomla.Start.php>

Whoa, that was fast! Wanted to reply that I checked my settings and you're correct. Thanks for the reply.
