
JoomlaCloner 1.9.1 out

Posted by Ovidiu - 2007/05/03 20:30

JoomlaCloner 1.9.1 has been released! Besides some general fixes in the cron management area we have a Good News for clients that have multiple domains in use, from now on you only need to register your main domain name in the 'Registered Websites' field from our site, all it's subdomains will automatically be licensed for JoomlaCloner!

This system subdomain licensing system is still in beta, so if you experience any problems, please open a Support Ticket and send us your Joomla admin details to the subdomain to check the issue if any!

Best Regards! JoomlaPlug.com Development Team
