
Change password

Posted by boukekoning - 2007/07/01 23:32

Hi again,

On the Roundcubeforum there is a patch for DirectAdmin-servers to change the password. I can't get it to work unfortunately. The instruction says:

```
#  
# Open: program/include/main.inc  
#
```

```
# Find: (line: 1227)
```

```
    // USER SETTINGS
```

```
# After add:
```

```
    'userpasswd' => 'rcmail_passwd_form',
```

But when I look for this part i can't find this.

Is it possible to import the patch? This would be a really wanted features for my users. The forum post is located here: <http://roundcubeforum.net/forum/index.php?topic=741.0>

Hope you can help!

Hi Ovidiu.

Just wanted to know if there is a chnge password update for roundcube for joomla component.

Thanks.

Greetings.

Unfortunately the password patch will only work for cpanel servers, IMAP passwords can't be changed through the service protocol!

I will see if i can make a post on how to apply this patch individually and provide a simple guide to do this, however this won't be included in the component install as default!

Ovidiu

My dear Ovidiu.
My server is cpanel 10.

I've done it.
I edited all the patched files and adapted them to work with Joomla.
Now i can change the password.

Here are the files.

PS: I've seen all kinds of problems when sef is on in Joomla. If you or anyone is using a sef component for Joomla, take a look on one option called "ALL LOWERCASE". Set it to NO. Also set your sef component to "SKIP" roundcube.

Greetings http://www.joomlaplug.com/components/com_joomlaboard/uploaded/files/roundcubemail_0.zip

Nothing special, but i would like to mention that this patch is for cpanel version 10 only.
Greetings
