
Install can't open file to read

Posted by miketwalker - 2008/02/25 01:56

I am having problems with both the urls in the ver.txt file from the zip as well as the ones from <http://www.joomlaplug.com/files/ver.txt> when I go to install.

Here is the readout I get:

Warning: fopen() : URL file-access is disabled in the server configuration in /home/u3/miketwalker/libertysentinel/html/Joomla.Start.php on line 622

Warning: fopen(<http://downloads.joomlancode.org/frsrelease/2/1/0/21065/Joomla-1.5.0.zip>) : failed to open stream: no suitable wrapper could be found in /home/u3/miketwalker/libertysentinel/html/Joomla.Start.php on line 622
Unable to open <http://downloads.joomlancode.org/frsrelease/2/1/0/21065/Joomla-1.5.0.zip> for reading!

I suggest you use our other tool called JoomlaDesktop, with your current host config settings you won't be able to use JoomlaStart
