
JoomlaCloner 1.5.1 released

Posted by admin - 2006/06/19 09:17

Version 1.5.1 of JoomlaCloner has been released and contains this fixed and addons:

- added a mode for ftp transfer in config, so users can select from Normal to Secure ftp transfer mode
- added 'Enable Direct Download Link', so users could download directly the backups, from a direct link, this is meant to solve the php memory_limit, but the backup must be with in the Joomla root path

For those of you having problem with cronjobs, not being able to run them because of their provider, we have decided to make a new simple component to manage the cronjobs through Joomla, please give us a 1-2 weeks to finish it out!

Good luck! Ovidiu
