
Conflict with Ja_larix VM_ProductSlideshow

Posted by studee - 2008/03/20 15:18

Hi, The Jpopup is cool working fine,

but when i put it in the Ja_larix the Product slide Stops

Whats the solution ????

I am not sure, it could be a javascript issue, could you post here a url to your website to look at the issue? Ovidiu

The javascript could be interfacing with the other extension you have there, unfortunately there isn't much i can help with

You could for start separate the pages where those 2 extensions appear, so for instance, if you use jpopup on one page do not use the other extension
