
XCloner 2.1 Released

Posted by admin - 2008/03/27 17:08

We are proud to announce the release of the XCloner 2.1 Stable version!

Along with this we also launched a new XCloner trial available here
http://www.joomlplug.com/index.php?option=com_trial&mode=2

We would like to thank all the users who participate in the beta testing, it has been a long way!

For those new to XCloner, the new JoomlaCloner upgrade is a standalone backup and restore application, that can work for any php/mysql site! It is also a native Joomla 1.5.x component!

For any questions or bug reports we are available both through our forum here or through the support ticket system!

Best Regards JoomlaPlug.com team
