
easysql

Posted by ironside1969 - 2008/05/28 13:31

I am using easySQL to execute a fire board script to upgrade. I am having problems in phpMyAdmin. When you open easySQL, you have the large box where you pay to script him, you also had to drop down menus. I'm a little unsure what to choose from from these drop downs, the left one is for tables and it lists all the tables in my database, I would imagine I would have to choose one of the fire board tables, problem is, I'm not sure which one. If anybody has an idea?
