
Pop Help Please

Posted by anntaj - 2008/06/06 03:04

Hello,

I am trying to make a small say 450x300 pop up on this page
http://dctc.com.au/index.php?option=com_content&task=view&id=44&Itemid=86

from each members name (for example the GAPDL link in blue) to show about 100 words and a logo.

I have the pop up working but it pops up a whole page not the small pop up I would like. It is linked to static content page as I do not know how to make it pop up what I need.

Current code is:

Could you please explain to me where I am going wrong?

I do not know where to create the 100 word and the logo as a static content page does not work.

Thank you
Ann

Do you have the popup active? I am not seeing the issue on the link you sent above! Ovidiu

Hello,

Yes, click on the blue GAPDL link in the last column on right

Thank you for helping me
Ann

You did not added the jpopup code inside that page content, please recheck our instructions page, you need to publish the mambot and add the {jpopup }{/jpopup } code inside the page content

Hi,

Sorry, I do not understand.

I have the link in the static content page, the link GAPDL has the following -

If this is wrong can you please explain in step by step for me as I read the instructions and something is not sinking into my brain.

Thank you
Ann

Ok, so you would have to do this:

1. delete the line 66 from mambots/content/jpopup.php

2. open this page http://dctc.com.au/index.php?option=com_content&task=view&id=44&Itemid=86 inside your html editor, and add inside it's source this code

```
{jpopup }my_popup_text_here{/jpopup }
```

3. publish the Jpopup mambot

If all goes well, you should have a popup appearing when you click on the GAPDI link

Thank you, but I do not see the code you say I am to add - could you send it again please?

Thank you
Ann

I forgot to say there is nothing on lines 65-67 in 66 from mambots/content/jpopup.php, I think I have deleted that previously while trying to work it out.

Thank you
Ann

Hello,

So I add the {jpopup }html code here{/jpopup } to my static content page? Do I edit the static content page in html view and add { jpopup}all the pop up info here{/jpopup }?

If this is wrong, I am sorry I am confused.

Do you have msn can I give you the login details so you can show me?

Thank you
Ann

Yes, you simply go in your Joomla backend and edit that page content html source and add the code there

Hi,
Thank you, I got it to work but I had to change the link code to:My Link

My problem now is it will not display in the correct position
top is set at 20 and left at 100 but it is displaying at the bottom of the page for some reason. Would you know why?

I also need multiple pop ups on the page for each members name, but I replied to a previous posting on that subject.

Thank you
Ann

Hi,

I found that if you have center selected it ignores the top and left positions. Solved that problem thank you.

Now just multiple pops up to work out

Thanks
Ann
