
Fatal Error after using Start Tool

Posted by Spirit21 - 2008/06/25 14:51

Hi, after installing Joomla 1.5.3 using Joomla start, I received the following error message:

Fatal error: Cannot instantiate non-existent class: jconfig in /home/chieh21/public_html/xinchao/includes/framework.php on line 48

Please advise.

Tks in advance!

When restoring the package, did you use an empty location? If so, does the configuration.php file from your Joomla root directory contain any data?

Ovidiu

Ovidiu,

Thank you for the quick response!

I have opened a help ticket request instead.

Tks,
C.
