
Move from Dream Host to Go Daddy

Posted by ironside1969 - 2008/06/30 17:04

I am seriously thinking about moving my website from dream host because it keeps slowing up and crashing. how easy would it be to move to go daddy. I might as well leave the domain name with dream host.

Well if you are planning to use JoomlaCloner/XCloner for the move,the processs should be pretty simply, once you have the backup ready simply follow the restore steps detailed in our documentation to make the new site available on the new server
