## X-Clone

Posted by govanmac - 2008/07/06 21:06

---

Hi

I have been reading about X-Clone, it says it is native to 1.5, will it still work with 1.0?

Also, I noticed it says it will back up other PHP sites, does this include Zencart, OS Commerce etc?

Thanks

John

Hi there! It can backup Joomla 1.0.x sites, however the install needs to be done standalone, it can only be installed as a Joomla component only for 1.5.x sites

And yes, it can backup Zencart and other php/mysql scripts
