
Joomla Roundcube - Feature/Future requests

Posted by tomi.seun - 2008/08/06 04:05

You guys are really doing a lot of work, sometimes I wonder what gives you inspiration. I'm not a programmer that's why I wonder how you get to cope making free softwares and having time to attend to suggestions, bugs and also help solve problems.

Keep up the good work.

I guess it be nice to have a version of Joomla-Roundcube that supports 1.5.x

Also a more implementation with a joomla site, like using Iframes, Wrappers or to link directly to Menu just like most other components do.

Anybody else thinking on the same frequency?

Hi there! The Joomla 1.5 version is still under development, we hope to also fix the iframe issue and make the component integrate properly with the Joomla design

Regards, Ovidiu
