
Invalid argument supplied???

Posted by sully725 - 2008/09/05 15:14

Hi everyone,

I just did my first backup with JoomlaCloner and although it says completed, I got the following warnings at the top of the page. Before I spend hours trying to figure out what I did wrong, I thought I would see if I could get some help here.

Warning: Invalid argument supplied for foreach() in
D:\XAMPP\htdocs\srm\administrator\components\com_cloner\cloner.functions.php on line 1894

Warning: Invalid argument supplied for foreach() in
D:\XAMPP\htdocs\srm\administrator\components\com_cloner\cloner.functions.php on line 1894

Warning: mysql_fetch_array(): supplied argument is not a valid MySQL result resource in
D:\XAMPP\htdocs\srm\administrator\components\com_cloner\cloner.functions.php on line 1972

Warning: mysql_fetch_array(): supplied argument is not a valid MySQL result resource in
D:\XAMPP\htdocs\srm\administrator\components\com_cloner\cloner.functions.php on line 1972

I am using Joomla 1.5.5 on localhost.

If anyone can let me know how to fix this problem I would greatly appreciate it.

Thanks in advance.

Sully

I would advise running a repair query on your database tables and also make sure you don't have any empty tables with no fields

You can also try to upgrade to XCloner and see how it goes

Regards, Ovidiu

Ok. I will give that a try, see what happens and get back to you.

Thanks.
