
Roundcube module and system\'s user

Posted by bozek - 2008/09/15 04:10

Hallo,
is it possible to check webmail users (login and password) against system users (/etc/shadow) just like e.g. SquirrelMail?
I dont have virtual users on my server, only postfix and /home/*/Maildir for each user.
Can I use roundcube module like imap client for these Maildirs ?
Thank you.

The current roundcube software version only allows verification based on the IMAP response on email address and pass matching, but i guess you can do that with some custom code
