
Revert to previous backup

Posted by lucius@agilitech.com - 2006/06/09 19:25

It would be nice to revert to a previous saved backup in the Restore backup screen. If you make a heinous mistake, you could then restore the site easily from a previous state.

Hi there! Well i think the solution for this would be as follow:

- use JoomlaCloner before and generate a clone before restoring
- restore the desired clone in place, over an existing site
- if it's any problem you always have the backup clone to restore back

How would that work?

As Easier Set Up Like just a "Restore" button where you could select a backup and just instantly revert back- that would make it easier
