It doesn\'t work..
Posted by TUPAC^^ - 2008/04/03 19:08

Hi, I've just installed the mambot succesfully. But I don't understand how to make it work! If anyone can post a basic code, just showing me an example, I'll be glad. I have to put only a picture and some text in the popup, that has to appear in the homepage.
Thanks a lot!

I suggest you check the other posts in this thread, there has been some discussion on how to properly edit that code, anyway, what is your site url where the code doesn't work and what code are you using?

I've used standard code {jpopup}--content--{/jpopup} and it works, but it doesn't in the homepage. I mean, if I use the jpopup in a content, the popup works properly, but when I publish that content on the homepage, the popup still doesn't work.
Thanks ;)

When adding the html inside the popup, make sure you do it by editing the content source and not through the editor html preview mode

This is not working at all. Not by any stretch.

But it gives me nifty code on my content page.

WHY ISN'T IT CLEARLY MARKED ON THE FREAKING DOWNLOAD PAGE THAT THIS DOES NOT WORK IN JOOMLA 1.5??????????????????????????????

I COULD HAVE SAVE MYSELF MORE HASSLES!!!!!!!!!!!!!
