
CSV Improved Cron jog couldn't put in

Posted by Ibrahim - 2009/05/04 23:13

Dear JCron,

I need to run the next cron job on my site:

```
php /administrator/components/com_csvimproved/helpers/cron.php username="admin" passwd="admin"
template_name="Product import" filename="/home/me/mygreatstock.csv"
```

If I try to write the command to the "Command to run" line, after saving the job JCron cutting the end of the command, and will be the next:

```
php /administrator/components/com_csvimproved/helpers/cron.php username=\
```

How could I create this job?

Thank you in advance

=====

Try replacing the " with ' or escaping the command line with the use of \"

Ovidiu

Hi,

Have you got to run JCron with CSV Improved?

If so, maybe share your experience?

Thank you!
Ingus
