
JCron 1.3 (404 - An error has occurred.)

Posted by nady - 2009/05/12 05:12

Hello there, I installed com_jcron1.3 on joomla 1.5 which is on IIS 6. After creating a new job using Manage cron jobs, it appears in the jobs list but when i try to click the task name i get (404 - An error has occurred.component not found error).

The other thing is that the cron is found on my D drive which task type am i going to use? Please assist me on the matter. Thanks in advance.

Hi there! To fix that error please re-download the jcron package http://joomlancode.org/gf/download/frsrelease/8134/39684/com_jcron1.3.zip and reinstall it on your new site!

As for the cron command, i am not sure what you asre supposed to run, but if you are on a windows host, most probably fsockopen or url is your best choice!
