## JoomlaStart v1.2 released

Posted by admin - 2006/04/16 20:33

---

We have released JoomlaStart V1.2

Changes:

- added a fix for permissions problems, so you may try to install Joomla by simulating a ftp upload process
- you can install now Joomla from your local server, this in case your provider doesn't allow to use fopen() function remotely to get the package
- for the ftp mode we added an automatic permission changer for the required directories!

Looking forward to your feedback!

JoomlaPlug Team
