
Help Installing Roundcube

Posted by morigeau - 2009/10/27 08:39

Hello everyone,

I've been trying for a few days now to figure out how exactly to get Roundcube to work with no luck. I'm sure I'm missing more than a few things. I've gone back to the very beginning starting with a fresh install of Roundcube v1.1 for Joomla. I'm using PHP 5 and Joomla 1.5.14 on Godaddy hosting. What do I need to do other than assign Roundcube to a menu item in order for it to work? Without touching anything (just assigning it to a menu) the two most common problems I receive are fatal error to non object on line 138 inside index.php where line 138 reads

```
ini_set('session.name', 'roundcube_sessid'); (line 137)
(line 138)
```

Hi there! Unfortunately roundcube for Joomla component works with Joomla 1.0.x system only, it does not work with Joomla 1.5.x systems

We might be able to integrate it with the upcoming Joomla 1.6.x series, but it depends on what the core developers plan to do next

Regards, Ovidiu

Ovidiu,

Thank you for your reply. So I'm guessing that legacy mode has no effect. That's too bad. Thank you for your time Ovidiu.
