## JoomlaStart Desktop Installer

Posted by admin - 2006/04/21 16:15

---

We are proud to announce the born of a new installer utility for Joomla!

JoomlaStart Desktop Installer is a Windows executable software that will help you install Joomla Software much safer, resolving the installation problems resulted from corrupted files!

The installer was made with the help of Ioncube Package Foundry and it's Virus Free!

Looking forward to your feedback!

Regards, JoomlaPlug Team

---

Hi there! No, it doesn't replace the web installer from our site:)

We gave a desktop alternative for users who maybe can't use our web installer from different reasons!

You might have noticed, the desktop installer is a little slower than our web installer, but it's a good alternative we think!

Anyway both tools were made in the thought of saving time and giving Joomla users time to play more:D

Best wishes, Ovidiu

ok, that sounds great desktop installer, i just have been looking, it doesn't look complicated, i have to try it. It is good sometimes when i can not use web installer.

---

Its great piece of software, well done guys.

regards,

=====
