
No Enable buttojn on 1.5

Posted by Barry - 2010/08/08 12:13

Hi I downloaded and installed JCron1.4.2-V-J1.5 on my joomla 1.5.20 and I couldn't find any "configuration" tab like in your demo and of course I could not find the "enable button". I then uninstalled and installed the JCron1.4J1.5compatibleversion and still no good. Installation went well and installed plugin and was enabled.

Is there anything else I need to be doing?

Hi there! Try checking the buttons on top, it should be one called Parameters like in the Articles area

Regards, Ovidiu

And as a note, the enable button has been replaced by a plugin that is automatically enabled
