
JoomlaCloner V1.6

Posted by admin - 2006/08/08 11:09

We have launch a new version for JoomlaCloner component called 1.6!

Here are the main changes beside the other small bug fixes:

- added tar functionality for backups generator, so users which don't have zip server utility can use tar
- added tar support for restore script
- added cron option for mysql drop option
- added ftp functionality to connect to other ports than default 21, to use this you need to specify in the ftp host field a value like this ftp.host.com:port

Also we modified the manual restore option, so now in order to restore a clone manually, you need to copy first the clone, and then all the files from the restore/ directory from our JoomlaCloner component archive, then launch as usual Joomla.Cloner.php in your browser and follow the rest of the restore process!

BEst REgards!

Hello,

For whatever reason I can't get into the subscription area to download the latest JC.

I can't even change my password from inside my profile options:ohmy:

Could you please e-mail me the latest 1.6 version? My current version is 1.5.1

Thanks

Peter
